

**eFigure 5.** Multivariate estimated differences in misreporting (defined as the difference between self-reported and measured weights) and 95% confidence intervals comparing the study sites (B=The Bronx, NY; C=Chicago, IL; M=Miami, FL; S=San Diego, CA; the largest site for a given background was used as referent) within the four Hispanic/Latino backgrounds sampled at more than one site ( $\geq 100$  participants of a given background per site).
